1 Title of paper in bold sentence case

First I. LastName1,2, First I. LastName2

1University of Illinois, 2Shirley Ryan AbilityLab (Chicago)

2 INTRODUCTION

This template was created in Microsoft Word. It provides authors with the formatting specifications needed to prepare their paper. Margins, column widths, line spacing, font and type styles are built-in: you can replace the existing text with your own (e.g. copy and paste). Ensure that the final version follows the guidelines provided in this document. Do not change the formatting in this template.

All submitted papers should include an “Introduction” section, as shown here, providing background and rationale for the topic addressed. The introduction section should conclude with a concrete and specific purpose statement. The remaining sections of the paper should be appropriate to the content and methodology used, depending upon the type of paper being submitted. For many research-based papers, this would include Methods, Results, Discussion and Conclusions; an Acknowledgements section may also be included. References should be included as the final section.

3 SUBMISSION INSTRUCTIONS

Submissions must be a minimum of 2 pages and a maximum of 4 pages in total (i.e. including References). Submissions must be in English.

4 LAYOUT

All margins are set at 3/4" (1.9 cm). Use an 11-point sans serif font (Aptos, Calibri, or Arial) for all text. All text (except the title) should be single-spaced and aligned left (not justified). A 6-point space should follow each paragraph

and heading; do not indent paragraphs. The title should be centered, bold font and sentence case (i.e. only the first word capitalized).

Two versions of the paper are required: a complete version and a blinded version. The complete version should be named according to the title of the paper (e.g. “Measuring_heart_rate_in_manual_wheelchair_users.doc”).

You can shorten this name if your title is very long, but do not include the author’s name. In the blinded version, delete the author(s) names and affiliations, as well as any identifying information. Ensure that the paper has no review comments visible that might reveal who the author is (i.e. accept or delete all track changes/comments). The blinded version should also be named according to the title of the paper, but preceded by the word “Blinded” (e.g. “Blinded_Measuring_heart_rate_in_manual_wheelchair_users.doc”).

5 HEADINGS

Main headings (e.g. Introduction, Methods, Results etc.) should be written in bold font and all capital letters. Sub-headings may be used, but only if there are at least two sections within that level of content. First level sub-headings are written in bold font and sentence case. Second level sub-headings, if required, are underlined and written in sentence case, as illustrated below. Do not indent headings or sub-headings.

5.1 Example of a first level sub-heading

5.2 Example of a second level sub-heading

7 REFERENCES

References

- [1] In-text citations must be numbered using square brackets as indicated here.
[1] Multiple sources are cited in the following manner. [2,3,4-7] References may be presented in either APA or Vancouver style format, but must be listed in order of citation and preceded by the citation number in square brackets. Each reference is followed by a 6-point space. Some examples of reference formats are provided below:
